

Choose your Bar Option

Do you have a minimum 41mm on your Shank?

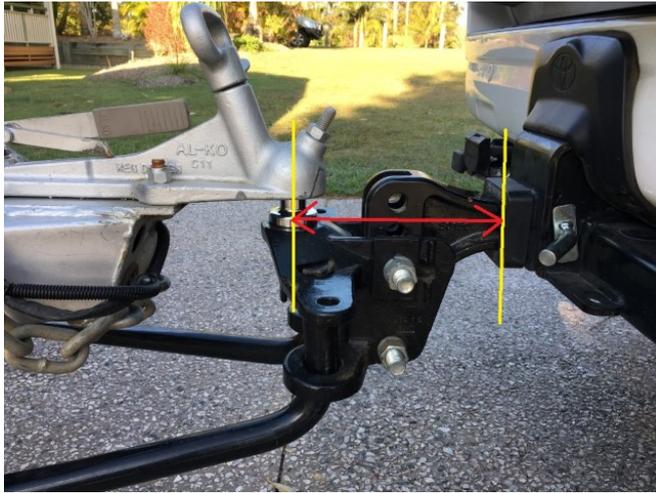

If Yes then the **Option 3 - Adjustable Shank** is the best solution

If bumper clearance is an issue then the **Option 3 - Standard Shank option** is best.

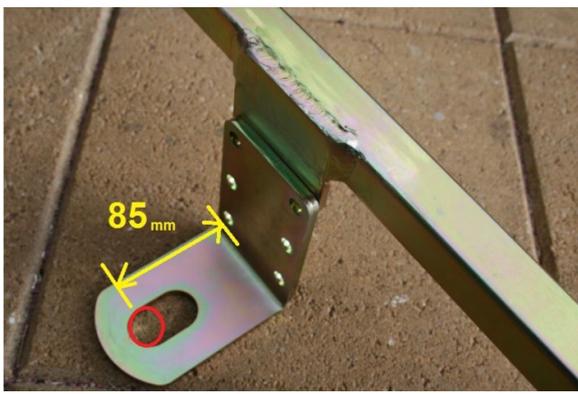

For either of these Shank options we need this additional measurement

If you do not have a minimum 41mm on the Shank then the **Option 1 – Large Angle** is the next best choice

You will need a minimum of 85mm for the **Option 1 – Large Angle** to work well and so the coupling can turn.

If neither of these work for you then **Option 2 – Standard Post** may be best.

Finally the **Cut Out Angle** option could also be best.
